

## TRIZ FOR TRANSITION MANAGERS

### Synopsis

Creativity is the top required competency of a Leader (IBM CEO Report). During this course, we are not just talking about what creativity is and why we need to enhance it, but learn how to improve and develop it with a number of systematic techniques, which help directly to generate new “out-of-the-box” ideas and systematically develop creative imagination. Not just learning several new techniques, but also learning how to evolve our imagination and capabilities to think out of the box. Like any skill, creative imagination requires development – it can be developed and it can be done systematically. Systematic approach to Creative Imagination Development (CID) – this is what makes this course unique and different.

### Training Objectives

1. Systemize problem solving
2. Understand the nature of a problem
3. Find all possible solutions
